

Erosion Control fabric blanket, made from 100% jute fibers, used on slopes up to 2:1. Works well on clay and loamy soils. Not recommended on sandy soils.

It's a cost effective all natural alternative to straw/wood fiber blankets. The natural looking, high strength eco jute mesh protects the soil surface from water and wind erosion while offering partial shade, moisture, and heat storage to accelerate vegetative development allowing uninhibited growth of wood plant species, grass, and ground cover.

Blanket weave has spaces of approximately 1/4" x 1/4". Roll Size: 4'x 225' Recommended stapling is 24" on Center, at vertical overlaps, and at center of vertical runs. Contact us for copy of typical installation requirements. (Staples sold separately).
