ELT EASY GREEN®
MODULAR LIVING WALL SYSTEM

VERTEXX® WALLS
FILTREXX® LIVINGWALLS™ SYSTEM

Filtrexx® LivingWalls™ division offers an extensive portfolio of living walls for structural, landscape and decoration applications. Landscape architects, designers, civil engineers and interior designers thrive on the possibilities our LivingWalls division offers to their green structure projects. Filtrexx LivingWalls has an extensive portfolio of living wall solutions that provide the underlying structure needed to permanently stabilize extreme grade changes. In addition, our living walls offer higher aesthetic appeal than conventional block or concrete systems – at a fraction of the cost. We build a wide range of Mechanically Stabilized Earth (MSE) and non-MSE solutions for walls and slopes from 45 to 80 degrees of inclination, with varying degrees of design flexibility and planting options. Furthermore, our LivingWalls division offers green roofs and bank stabilization solutions.
